Andere seltene Sarkome, Mischtumoren, genitale Sarkome und Schwangerschaft 2016-01-01 In der komplett überarbeiteten und deutlich erweiterten zweiten Auflage des nun zweibändigen Buches werden die Sarkome, Mischtumoren und andere seltene mesenchymale Tumoren des weiblichen Genitale und retroperitonealen Beckenraumes dargestellt. Die genitalen Sarkome und malignen Mischtumoren sind aufgrund erheblicher diagnostischer Probleme mehrheitlich ein Zufallsbefund. Neben nur wenigen aussagekräftigen Studien existieren keine definierten Therapiestandards und Leitlinien. Wegen der schwierigen differentialdiagnostischen Abgrenzung und therapeutischen Unsicherheiten wurden auch die mesenchymalen Tumoren mit auffälligen klinischen Eigenschaften sowie einem unsicherem malignen Potential und gutartige Mischtumoren in die Publikation aufgenommen. Für jede Entität erfolgt eine detaillierte Besprechung zur Epidemiologie, Ätiologie und Pathogenese. Auf die makro- und mikroskopische Charakterisierung, die Prognose, die klinische und bildgebende Diagnostik sowie Differenzialdiagnose wird besonderer Wert gelegt. Der Fertilität und Schwangerschaft ist ein eigenständiges Kapitel in Band 2 gewidmet. Die klar formulierten Therapieempfehlungen beziehen sich jeweils auf die auf das Organ begrenzte sowie auf fortgeschrittene, rezidierte und metastasierte Tumoren. Die Möglichkeiten der Operation, der Bestrahlung, der neoadjuvanten, adjuvanten, sowie palliativen Hormon- und Chemotherapie und Empfehlungen zur Nachsorge werden umfassend und kritisch dargestellt. Das Buch, mit einer Vielzahl an hochwertigen vierfarbigen Abbildungen und einem umfassenden aktuellen Literaturverzeichnis, soll für den klinisch und ambulant tätigen Gynäkologen und Onkologen ein Leitfaden zur Entscheidungsfindung sein und kann gleichfalls für den Pathologen von Nutzen sein. Das repräsentative aussagekräftige Bildmaterial ist auch das Resultat einer umfassenden Mithilfe durch zahlreiche Gynäkologen aus ganz Deutschland. Für die aufgeführten Tumorgruppen existiert gegenwärtig keine anderweitige zusammenfassende Monographie. Ebenfalls erhältlich: Sarkome des weiblichen Genitale Band 1: Glattmuskuläre und stromale Tumoren ISBN 978-3-11-025317-7 e-ISBN 978-3-11-025318-4

Decision Tools for Radiation Oncology Carsten Nieder 2014-03-13 A look at the recent oncology literature or a search of the common databases reveals a steadily increasing number of nomograms and other prognostic models. These models may predict the risk of relapse, lymphatic spread of a given malignancy, toxicity, survival, etc. Pathology information, gene signatures, and clinical data may all be used to compute the models. This trend reflects increasingly individualized treatment concepts, the need for approaches that achieve a favorable balance between effectiveness and side-effects, and the goal of optimal resource utilization reflecting prognostic knowledge. In order to avoid misuse, it is important to understand the limits and caveats of prognostic and predictive models. This book provides a comprehensive overview of such decision tools for radiation oncology, stratified by disease site, which will enable readers to make informed choices in daily clinical practice and to critically follow the future development of new tools in the field.>

Esophageal Squamous Cell Carcinoma Nobutoshi Ando 2014-10-22 Esophageal cancer causes an estimated 386,000 deaths worldwide and is the sixth most common cause of death for men. The background characteristics of esophageal cancer treatment are markedly different between Asian and Western countries, however. In tumor histology, squamous cell carcinoma associated with smoking and alcohol consumption is overwhelmingly prevalent in Asia, whereas adenocarcinoma associated with Barrett's metaplasia is markedly prevalent in the West. In Asia, especially in Japan, the key persons who play important roles in the management of esophageal cancer patients are surgeons; in the West those roles are filled by medical and radiation oncologists as well as surgeons. The philosophy of surgeons regarding cancer surgery varies from locoregional to local tumor control, particularly in focusing on lymph node dissection. Physicians' approach to surgical adjuvant therapy differs, therefore, between Asia and the West. Considering these East-West differences in esophageal cancer treatment, the currently available results of Western evidence should not be considered directly applicable to esophageal cancer in Asia. In this book, the authors discuss the knowledge base

in Japan in terms of treatment of esophageal squamous cell carcinoma. Since this volume contains a wide spectrum of current information and addresses topics surrounding the treatment of patients with esophageal squamous cell carcinoma, it is highly relevant to Asian physicians and researchers as well as to their counterparts in the West.

The Selection and Use of Essential Medicines World Health Organization 2015 This report presents the recommendations of the WHO Expert Committee responsible for updating the WHO Model Lists of Essential Medicines. The goal of the meeting was to review and update the 18th WHO Model List of Essential Medicines (EML) and the 4th WHO Model List of Essential Medicines for Children (EMLc). In accordance with approved procedures, the Expert Committee evaluated the scientific evidence on the basis of the comparative effectiveness, safety and cost effectiveness of the medicines. Both lists went through major revisions this year, as the Committee considered 77 applications, including 29 treatment regimens for cancer, and innovative hepatitis C and tuberculosis (TB) medicines. The Expert Committee recommended the addition of 36 new medicines to the EML (15 to the core list and 21 to the complementary list); and recommended the addition of 16 new medicines to the EMLc (five to the core list and 11 to the complementary list). Annexes to the main report include the revised version of the WHO Model List of Essential Medicines (19th edition) and the WHO Model List of Essential Medicines for Children (5th edition). In addition there is a list of all the items on the Model List sorted according to their Anatomical Therapeutic Chemical (ATC) classification codes.
