A Taste for Treason Andrew Jeffrey 2022-10-06 A gripping true story of wartime espionage. Dundee, 1937. When housewife Mary Curran became suspicious of hairdresser Jessie Jordan's frequent trips to Nazi Germany, she had no idea that she was about to be drawn into an international web of espionage. Thanks to a tip off from Mary, MI5 and the FBI launched major spy hunts on both sides of the Atlantic. This is the true story of a decade-long series of Nazi espionage plots in Britain, Europe and the United States. It shows how a Nazi spy's letter, posted in New York and intercepted in Scotland, broke spy rings across Europe and North America. And it reveals, for the first time, how that letter marked the genesis of an intelligence and security alliance that today includes the United States, the UK, Canada, Australia and New Zealand. 'Fascinating, gripping and expertly researched... an extraordinary true tale of espionage told with all the drama and panache of a spy thriller' – Michael Smith, bestselling author of The Secrets of Station X

[Arming the Luftwaffe](#) Daniel Uziel 2011-11-16 During World War II, aviation was among the largest industrial branches of the Third Reich. About 40 percent of total German war production, and two million people, were involved in the manufacture of aircraft and air force equipment. Based on German records, Allied intelligence reports, and eyewitness accounts, this study explores the military, political, scientific and social aspects of Germany's wartime aviation industry: production, research and development, Allied attacks, foreign workers and slave labor, and daily life and working conditions in the factories. Testimony from Holocaust survivors who worked in the factories provides a compelling new perspective on the history of the Third Reich.

[Jet Prototypes of World War II](#) Tony Buttler 2019-09-19 While World War II raged, pioneering aircraft and engine designers were busy developing the world's first practical jet-powered research aircraft to test and prove the new technology. This book examines the aircraft that paved the way for Germany's Me 262 and Britain's Meteor - the world's first jet fighters. Throughout the war, Germany, Italy and Britain engaged in top-secret jet programmes as they raced to develop the airpower of the future. Various experimental aircraft were trialled in order to achieve the goal of producing an effective engine and fighter that could harness the potential of the jet power. These included the German Heinkel He 178 research aircraft and Heinkel He 280 jet fighter prototype, the famed British E.28/39 research aircraft built by Gloster Aircraft as well as the stillborn E.5/42 fighter and E.1/44 Ace fighter prototype, and finally the remarkable Italian Caproni-Campini N.1/CC 2 research aircraft. Illustrated throughout with full-colour artwork and rare photographs, this fascinating study examines the fore-runners to the military jet age.
