Clinical Medicine of the Dog and Cat Michael Schaer 2022-10-14 The fourth edition of Clinical Medicine of the Dog and Cat remains the most extensively illustrated and practical small animal veterinary textbook on the

market. It continues and expands on the revolutionary problem-based approach of the previous three editions, with more than 1,100 clinical color photographs, diagrams, and tables. The book is divided into five color-coded sections—General Approach, Diagnostic Techniques, Disease of Specific Organ Systems, Multisystemic Disorders, and Elements of Therapy. For this edition: Case studies are integrated within the relevant chapters for ease of reference. The first section on common medical problems now includes abdominal distension, peripheral edema, proteinuria, regurgitation, and seizures. Chapters on thoracic and abdominal radiographs are now included in a unique new section on Diagnostic Techniques, encouraging an integrated learning approach. The third section contains detailed medical information covering most organ systems, with several chapters completely rewritten and others comprehensively updated to include additional text and images. Additional endoscopic, radiographic, CT, and MRI images are included alongside clinical photographs; very few veterinary textbooks have such a rich emphasis on photographs. Each section has a limited number of recommended updated references. The practical information is presented with text, tables, and algorithms, while each chapter is arranged to provide the definition of each disorder, its clinical features, the differential diagnoses, the diagnostic methodology, and the treatment and prognosis. The formatting has been improved to make this textbook easy to read and comprehend. The busy veterinarian or student is thus provided with a readily available resource of important clinical information in a clear, brief manner. Diagnostic and therapeutic algorithms in internal medicine for dogs and cats Federico Fracassi 2022-09-26T00:00:00+02:00 The problem-oriented approach (POA) is the method recommended by the College of Internal Medicine to address and resolve medical questions and problems. Hence the idea of creating a book based on algorithms dealing with the main clinical and laboratory canine and feline clinical abnormalities, using an innovative perspective. Each one of the 85 algorithms guides the reader step-by-step with logical, practical, cost-effective options to proceed from a general concern, laboratory abnormality, or imaging finding to a specific diagnosis or treatment. A concise summary is provided on the first page of each topic, the algorithm follows, and then succinct explanations are provided for many of the recommended steps within each algorithm. In this book, two useful and innovative aspects were included: color codes and links for additional information within the algorithm. Yellow indicates the diagnostic path, red the diagnosis and blue the therapy; this allows the veterinarian to be guided through the diagnostic labyrinth in order to reach the most appropriate therapy. Inside the red boxes, the list of differential diagnoses for each problem can quickly be identified. By following the yellow boxes one can understand how to reach these diagnoses, and optimize the diagnostic protocol. Moreover, comprehensive notes, linked to the algorithms by references, give more details regarding a specific diagnostic investigation, a particular disease or the therapy recommended.
