Water-resources Engineering David A. Chin 2006 This in-depth review of water-resources engineering essentials focuses on both fundamentals and design applications. Emphasis on fundamentals encourages readers' understanding of basic equations in water-resources engineering and the background that is necessary to develop innovative solutions to complex problems. Comprehensive design applications illustrate the practical application of the basic equations of water-resources engineering. Full coverage of hydraulics, hydrology, and water-resources planning and management is provided. Hydraulics is separated into closed-conduit flow and open-channel flow, and hydrology is separated into surface-water hydrology and ground-water hydrology. For professionals looking for a reference book on water-resources engineering.

The Archaeology of Power John Steane 2001 A groundbreaking study detailing what archaeology can tell us about the middle-ages. The study of government in Britain and North-West Europe during the middle ages has traditionally been the monopoly of historians. In this remarkable book the author shows what archaeology can contribute to the overall picture of medieval society. In particular he looks at two areas: the objects, such as costume, crowns, thrones and sceptres which were vital symbolic elements in complex liturgical and ideological systems and the buildings, palaces, castles, monasteries which were created by powerful elites and provided the space within which symbolic functions were played out.

Pipelines in the Constructed Environment American Society of Civil Engineers. Pipeline Division. Conference 1998 New pipeline construction, the maintenance of existing pipelines, and the rehabilitation or replacement or deteriorating pipelines often takes place with many challenges and constraints imposed by developmental regulations. The 1998 Pipeline Division Conference provided a forum for those involved in the field to share ideas and learn more about the issues faced today. These 92 peer-reviewed papers reflect the current methods and technology in the field of pipeline construction. Proceedings of the 1998 Pipeline Division Conference, August '98, San Diego, CA.
