Healthy Aging Patrick P. Coll 2019-03-29 This book weaves all of these factors together to engage in and promote medical, biomedical and psychosocial interventions, including lifestyle changes, for healthier aging outcomes. The text begins with an introduction to age-related changes that increase in disease and disability commonly associated with old age. Written by experts in healthy aging, the text approaches the principles of disease and disability prevention via specific health issues. Each chapter highlights the challenge of not just increasing life expectancy but also decreasing disease burden and disability in old age. The text then shifts into the whole-person implications for clinicians working with older patients, including the social and cultural considerations that are necessary for improved outcomes as Baby Boomers age and healthcare systems worldwide adjust. Healthy Aging is an important resource for those working with older patients, including geriatricians, family medicine physicians, nurses, gerontologists, students, public health administrators, and all other medical professionals.

The Guide to Assisting Students With Disabilities Dr. Lisa M. Meeks, PhD 2015-08-13 Describes how to meet the needs of health science students with disabilities Students with disabilities studying health sciences face unique challenges within their educational environments that require distinct accommodations. This manual is a vital resource for administrators and faculty in health science programs that describes how to create accommodations that meet the needs of students with disabilities in academic health science settings. Grounded in federal disability law, case law, and Office for Civil Rights (OCR) determinations, this highly practical manual is written by experienced disability service providers from some of the most prestigious health science schools in the country. In a clear, well-organized format, they bring their expertise to bear on all aspects of disability and disability law in the health science setting. Citing legal cases and real life scenarios, the manual describes best practices for good decision-making, how to avoid problems by implementing strong accessibility-focused policies, and how to resolve problems in difficult cases, with a focus on providing effective services for students while protecting the institution from potential liability. Each chapter is replete with illustrative examples, including tips for creative accommodations, advice for troubleshooting, and specific guidance for working with students with all types of disabilities. The book describes the process for determining disability accommodations and provides examples of typical accommodations in didactic as well as clinical and laboratory settings. Tools provided in the text include sample letters and procedures, lists of nationwide professional resources, flowcharts, graphs and worksheets to assist disability service providers with determining and implementing appropriate student accommodations. Additionally, it discusses myths about disability, the importance of professional communication around disability, and how to encourage a culture of disability acceptance within schools. With its concrete framework, this book will help disability service and administrative professionals move away from a mode of putting out fires and toward establishing a welcoming environment where students feel safe to disclose their disabilities early and seek the support and accommodations needed to facilitate equal access. Key Features: Addresses all aspects of disability and disability law for students in the health science setting Includes clearly written Do's and Don'ts Presents examples of accommodations that are appropriate in the classroom, clinic, and laboratory Provides easy to follow flowcharts and worksheets Includes resources for students and legal case examples throughout

The Political Economy of Financial Development in Malaysia Lena Rethel 2020-12-21 Current inquiries into the political economy of financial policymaking in Malaysia tend to focus on the high-level drama of crisis politics or simply point to the limited impact of post-crisis financial reforms, given that politico-business relations have remained close. In so doing, pundits ignore a number of intriguing questions: what is the relationship between financial development and financialisation and how has it played out in the Malaysian context? And more generally: how can a country like Malaysia become significantly more financially developed, yet fail to emancipate the financial system from political control; a core element of the financial development discourse? To unravel the complexities of this puzzle, this book subjects the history and contemporary practices of financial policymaking in Malaysia to scrutiny. It argues that to understand financial development in Malaysia, its progress and reversals, it is important to conceptualise it as a political, rather than a merely technical process. In so doing, the book echoes a more profound concern in the political economy literature, namely the evolving relationship between states and markets, and the supposed retreat or reassertion of the state at a time of increasing (financial) globalisation. The book can generate further insights into the evolving role of the state with regard to broader processes of development and marketisation, as they relate specifically to finance.

Pathways to Environmental Sustainability Roberta Salomone 2014-02-19 This book brings together, in a single volume, an overview of multiple applications of the concept of environmental sustainability, featuring examples of useful methodologies and tools for pursuing environmental targets, experiences and case studies spanning a variety of sectors, embracing both industry and research projects; and case studies applied to very different territorial contexts. The first section of the book covers methodologies and tools for environmental sustainability, including Industrial Ecology, Urban Metabolism, Life Cycle Assessment, analysis of industrial water footprint and such chemical technologies as Supercritical Separation Technology (HYST). Part Two provides case studies of environmental sustainability in specific industrial sectors including electronics, pharmaceutical manufacturing, bio-energy, agriculture, food and residential construction retrofitting. Part Three explores experiences of environmental sustainability in territorial contexts on a local, regional or national scale. This section includes chapters on sustainability in the Republic of San Marino, the European "Covenant of Mayors" urban sustainability initiative and efforts to promote sustainability in Italy, Norway and Poland among others. The book concludes with a discussion of Common Agricultural Policy (CAP) in Objective I regions of Italy. Featuring the contributions of academics, managers operating in various productive sectors and consultants, the book aims to promote the growth and spread of scientific research and technological development for environmental sustainability.

Green Jobs for Sustainable Development Ana-Maria Boromisa 2015-06-26 A 'green economy' must be built on 'green jobs' - the kind of employment that is low carbon, intended to reduce energy use and expected to restore environmental quality. But attempts to define exactly what a 'green job' is have led to varied and often contradictory answers. There are many unresolved questions including whether we consider jobs in the nuclear fuel industry to be green jobs? Or is a worker at a glass making company which supplies the glass for the solar photovoltaic industry doing a green job given that glass making is a 'dirty' industry? This book deals with the relationship between "green" concepts (green jobs, green economy, green growth) and sustainable development. It examines to which extent creation of green jobs supports overall economic development as opposed to creation of elitist jobs and greenwashing. In order to do so, general conceptual frameworks for green jobs, green economy, green growth and green policy are presented as well as their implementation in ten countries selected among the Group of Twenty. The selection includes advanced (the European Union, the United States of America, Australia, Canada, Republic of Korea, Japan) and developing countries (Mexico, China, Turkey and Brazil). The analysis presented in this book shows that although green concept is well-intentioned, its implementation depends on local circumstances – economic, political and social. Developed countries perceive green growth as a way to create new markets and demand, while developing countries rely more on labor intensive growth and less expensive green jobs. Thus, greening the economy does not diminish differences between rich and poor. This book is suitable for those who study and work in Ecological Economics, Sustainable Development and Labor Economics.
